

Assignment 2 – Text Adventure Game

Planning Document

Due: Wednesday, October 7, 2026

The Game: The Lost Cave

Main character: You – an explorer searching a cave for treasure.

Goal: Collect as much gold as you can and make it out.

Progress tracker: Gold (an int). It's printed after every step so the player can always see how they're doing.

The Decisions (branches)

Four choices the player makes, each an if/else:

- DECISION 1 – Left tunnel (find gold) or Right tunnel (safe but empty).
 - DECISION 2 – (your choice, e.g. pick the lock or climb down a hole).
 - DECISION 3 – (your choice, e.g. open the chest or leave it).
 - DECISION 4 – (your choice, e.g. fight the bats or sneak past).
-

The Random Events

Two outcomes decided by Random (not by the player):

- RANDOM 1 – The rope bridge either holds or snaps (lose gold). Coin-flip with `random.nextInt(2)`.
 - RANDOM 2 – (your choice, e.g. the chest is treasure or a trap). Another coin-flip.
-

The Endings

- Lots of gold (20+) → escape rich (good ending).
 - Some gold → make it out okay.
 - No gold → crawl out empty-handed (bad ending).
-

Rubric check

- 4 decisions (if/else) – yes.
- 2 random outcomes (Random) – yes.
- Visible progress (Gold printed each step) – yes.
- Variables named clearly: `gold`, `choice1`–`choice4`, `bridgeLuck`, `random`.
